**DETAILED ACTION**

1. Amendment filed on January 14, 2005 has been entered.

**EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Anthony V.S. England on January 31, 2005.

The application has been amended as follows:

Claim 17 is canceled.

Claims 18-20, line 1, changed "claim 1" to --claim 13--.

***Reasons for Allowance***

3. Claims 7-16, 18-20 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 7-16, 18-20 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Voss (U.S. Patent No. 6,252,818), and others, does not teach the claimed invention having a method for a memory array, and an apparatus of a memory array including a pull-up transistor coupled, by conducting electrodes, between

a voltage supply and an output of one of the L inverters, the pull-up transistor having a gate coupled to the control node so that if the control node is high the pull-up transistor tends to be turned off, and if the control node is low the pull-up transistor tends to be turned on; and a isolation transistor having a gate coupled to the control node and having conducting electrodes interposed between ground and a transistor of a penultimate one of the L inverters, so that if the control node is low this tends to isolate an output of the penultimate inverter from ground, permitting the pull-up transistor to pull up an output of the penultimate inverter, which in turn tends to drive the timing signal low, and if the control node is high this permits the timing signal to follow the clock signal.
